

# Золотодобывающая геологоразведка "Ридли Лейк"

“ ”

Золотой проект Ридли Лейк состоит из 196 смежных непатентованных одначейковых и пограничных горных отводов, в которых Richmond владеет 100%-ной долей. Проект расположен в центре Зеленокаменного пояса Суэйзи на севере центральной части провинции Онтарио в поселках Ролло и Рэйни, Горнодобывающее подразделение Поркупайн, а точнее, в 40 км к юго-западу от города Фолейет и в 120 км к западу-юго-западу от города Тимминс.

Среди недавних значительных открытий золота в пределах SGB – месторождение Коте-Лейк (приобретенное компанией lamgold в апреле 2012 года за \$585 млн.), а также золотое открытие Probe Mines Borden Lake (недавно приобретенное компанией Goldcorp за \$526 млн.) – месторождение золота с многомиллионной унцией, расположенное примерно в 23 милях к западу.

– Ранние геологоразведочные работы на территории участка начались в 1932 году. В центральной части участка были обнаружены две кварцевые жилы (Сирил Найт и Агуара), ориентированные по простиранию с востока на запад. Эти жилы были обнаружены на поверхности на протяженности до 245 м, а их ширина варьировалась от 1 до 3 м. Пробы из этих жил были очень разнообразны, содержание в них варьировалось от следов до 23 г/т золота (0,7 унции на тонну). – Круглогодичный доступ к Проекту обеспечивается сетью лесовозных и кустарниковых дорог, а его подстиляет часть крупной последовательности ранних докембрийских вулканических пород и отложений, называемых вулканическим комплексом Свейзи или метавулканическим метаседиментационным поясом Свейзи-Делоро.

– Золотая минерализация, обнаруженная в ходе алмазного бурения на проекте, связана с различными геологическими особенностями, включая развитие сдвиговых зон, системы кварц-карбонатных штокверков и контакты между фельзическими и мафическими потоками.
